

CASE STUDY

RESIDENTIAL PROJECT
NAPLES, ITALY

2020

Binnendijk 40
9130 Beveren, Belgium

ABOUT

Application Type Residential

Location Naples, Italy

Owner: Home Lentano

Project Management: Ing Dario Nasti - Studio di Ingegneria Nasti

CHALLENGE

This high-level structure built in Naples, in the fantastic location of Vesuvius national park, is a stunning residence that beautifully combines tradition, art and technology. The owner is possessing an important amount of art gallery products, so he needed an exquisite look & feel for of the home automation solutions. The solution needed to include the possibility to handle multiple climate applications, full audio and entertainment integration, as well as lighting scenes, to highlight the art pieces in the residence. In addition, the system needed to feature the latest technology, while merging with a traditional look structure, having also the ability to integrate with shading and AV systems to create one-touch scenic presets. Also, it needed to integrate with the Video Door Entry system from BTicino, MyHOME.

SOLUTION

Vantage products matched all the requirements as well as the standard of luxury, becoming the state-of-the-art reference as a 'smart home' concept. The products blended perfectly in the gallery-home atmosphere that the house provides and into the custom designed décor, while making the experience extravagant, relaxing and more high-standard.

This project reflects the perfectly balanced solution where art and tradition merge with technology.

BENEFITS

- Art & technology combined;
- Minimalistic & modern design;
- Customizable solutions;
