

CASE STUDY

RESIDENTIAL PROJECT
LOS GRANADOS GOLF, SPAIN

2020

Binnendijk 40
9130 Beveren, Belgium

ABOUT

Application Type Residential
Location Spain
Project Management DOMOSAT

CHALLENGE

This modern apartment in Los Granados Golf area has fully integrated Vantage systems that allows the owner to control all audio and video equipment, lighting and blinds. Vantage allows you to control all the lighting of the house in a comfortable, versatile and elegant way.

After a water leak detection, the owner was looking into a smart and modern solution for his modern apartment in Los Granados Golf, Spain, and the integration with Vantage ticked all the boxes for this project.

SOLUTION

The water leak detection was a problem solved through the small water leak detectors in wet-rooms attached to CIS10 that detects if any water leak occurs, and through an electric valve, it cuts-off the water supply and sends a notification. With the Equinox40 and temperature sensors, Vantage controls HVAC system in combination with under-floor heating system. With only one thermostat (thermostat widget in EQ40) Vantage controls the entire climate system - COOL mode by DAIKIN VRV system, "Heat" mode by the combination of DAIKIN VRV system and underfloor heating system. Vantage, together with other integrated systems develops a top-level of quality and luxury for this project.

BENEFITS

- Integrated product features;
- Minimalistic & modern design;
- Customizable solutions;

PRODUCTS

- Flushmount Mini Motion Sensors
- Keypad Station Easytouch
- Equinox 40
- Infusion Controller II
