

# CASE STUDY

Campanile Paris Ouest - Pont de Suresnes  
for a brand-new guest stay experience

2022

Gentse Baan 66/ 204 - 9100  
Sint-Niklaas, Belgium

## ABOUT

Application Type: Hotel  
Location: Suresnes, France

## CHALLENGE

The goal in carrying out this project was to convince a larger hotel group of all the Legrand Guest Room Management System advantages. In this regard, sales presentations or demo cases were not enough, a truly usable demo was needed to evaluate the guests and hotel staff experience over a longer period.

## SOLUTION

Campanile decided to change the top floor of the Suresnes hotel and reduce the number of rooms to make 5 larger junior suites and even a VIP suite. Here's where Legrand was entrusted with equipping these rooms with the most suitable Legrand Guest Room Management solution from the Group offer. In each room a dedicated BACnet IP Room Controller Unit has been installed as a central brain. This RCU already has the outputs for the lighting circuits by default. With regards to the user interface, the junior suites have been equipped with the standard SCS bus output UX Touch bedside panels in combination with the BTicino Livinglight commands while the VIP suite has been fully equipped with UX Touch commands.

A motion sensor has been installed under the bed to detect when people wake up during the night so that the light turns on allowing the guest to access the bathroom via a safety lighting path. Thanks to the hotel room controller software, in addition to the single lights control, it is now also possible to program scenarios such as welcome / goodbye by combining the various functions of the room, such as lights, temperature, and much more, guaranteeing so for a great stay experience. For a more complete control of the light and temperature functions, in the suites of the Campanile Suresnes it was also desired the possibility of control via tablet. MySmartJarvis has brought the solution to this need and implemented the integration with the Daikin HVAC system on one side and the Legrand Room controller on the other side.

## BENEFITS

The solution implemented in the Campanile Suresnes suites gave the opportunity to experience the Legrand Group Guest Room Management System multiple advantages in terms of high technology and functionality that guarantee total comfort and safety for guests and staff. It has also been shown that this demo installation can help hotel groups better understand its benefits so that they can replicate it in other projects.

## PRODUCTS

RCU bacnet & Powersupply  
UX panels  
Livinglight SCS bus commands  
Motion sensors

HVAC-Daikin integration  
MySmartJarvis tablet control  
Legrand group electrical closets and MCB  
Livinglight wiring devices
