DRIVER TOOLS

Software

Fully integrated projects are what make for a rich and unique homeowner experience. Driver Tools[™] provides the Vantage dealer with the ability to create and edit one way and bidirectional drivers for use in InFusion Design Center Projects.

Driver Tools is the application that is used to build communication drivers for any IR, serial or IP based device. With these re-useable drivers Vantage project programming and integration of distributed audio systems, HVAC controllers, security panels, shade controls, pool and spa equipment, home theaters and other systems becomes easier than ever before. Use these drivers in conjunction with keypad programming and touchscreen design for control and feedback.

Product Highlights

- Create one-way and bi-directional integration drivers
- Supports IR, serial and IP based devices
- Online library with development stages:
 - In-progress
 - Submitted
 - Certified
- Reusable for future projects
